MANUAL FILTER SHAKER SYSTEM (MFS)

- The filter shaker system consists of a spring action mechanism operating directly onto the filter cage located inside of the filter chamber. The system is operated by pressing on the ergonomic handle located on the side of the filter chamber.
- The Manual Filter Shaker dislodges the accumulated caked-on dust from the filter thus improving the filter's performance.
- A dralon pre-filter for very fine dust is included with the MFS filtration system.
- The filter, along with the filter cage, can be easily removed from the filter chamber and washed with lukewarm water and mild detergents.
- HEPA Filter 99.995% @ 0.3 micron. Tested: IEST RP-CC001.3. Or ULPA filter 99.999% @ 0.12 micron. Filtration Efficiency of 99.9995% @ 0.18 micron. Tested: IEST RP-CC001.3. is available (optional).
